

East Central Energy Construction Charges

PLEASE NOTE: ALL REQUIRED CHARGES MUST BE PAID BEFORE YOUR ELECTRICAL SERVICE CAN BE SCHEDULED.

Single Phase Service - Overhead and Underground Line Extension Residential:

\$300.00 Contribution in Construction (Covers first staking trip, administration, processing and handling of permits).
\$5.80 per foot.

An *additional* \$9.00 per foot will be assessed for Road Push segments (placement of underground lines under roadways) as defined by ECE. Directional Boring will be Contractor Estimate.

If construction takes place between November 1 and April 1, additional winter charges will apply both to the above footage and the Road Push footage.

Overhead and Underground Single Phase Commercial Services

\$300 Contribution in Construction
\$5.80 per foot

An *additional* \$9.00 per foot will be assessed for Road Push segments (placement of underground lines under roadways) as defined by ECE.

Directional Boring will be Contractor Estimate.

If construction takes place between November 1 and April 1, additional winter charges will apply both to the above footage and the Road Push footage.

Platted Residential Single Phase Developments – Recorded at the County Office

\$1,500.00 Contribution in Construction
\$ 5.80 per foot

An additional \$9.00 per foot will be assessed for Road Push segments as defined by ECE.

Directional Boring will be a contractor estimate.

Winter charges apply November 1 to April 1, on both line footage and Road Push footages.

Platted Developments – Connect Fee Only

\$300.00 Contribution in Construction

Three-phase extension Overhead or Underground Services over 1,000 KVA

Cost of service will be determined by the infra-structure needed to service the load.

Overhead or Underground Three phase Service 1,000 KVA or smaller

\$1,000.00 Contribution in Construction
\$13.65 per foot

An additional \$9.00 per foot will be assessed for Road Push segments as defined by ECE.

Directional Boring will be Contractor Estimate.

Winter charges apply November 1, to April 1, on both line footage and Road Push footages.

Platted Residential Three phase Developments – Recorded at the County Office

\$1,500.00 Contribution in Construction
\$13.65 per foot

An additional \$9.00 per foot will be assessed for Road Push segments as defined by ECE.

Directional Boring will be Contractor Estimate.

Winter charges apply November 1 to April 1 on both line footage and Road Push footages.

Platted Industrial Developments – Recorded at the County Office.

The customer will be billed the installed cost of the project. An estimated project cost will be required to be paid before construction begins. At the completion of construction, the customer will receive an invoice or refund for the amount over or under the paid estimate.

Winter Underground Construction Charge:

An additional \$6 per trench foot will apply to any underground construction from November 1 through April 1. This is non-refundable and applies to both line footage and Road Push footages.

Underground Service Single Phase:

Option one:

A 200-amp meter pedestal with 200-amp breaker and GFI is placed within 10' of the transformer on the lot line or approximately 150' from the structure. This meter pedestal unit may be purchased from ECE for \$600 in addition to the \$300.00 Contribution in Aid or from an electrician. The "Request for Inspection" form is filed by ECE on an ECE purchased pedestal. Additional line extension charges will apply if the pedestal is not within 10' of the transformer.

Option two:

If meter socket is to be located on structure, or by a mobile or manufactured home, the electrician (or homeowner) will provide and install an underground meter socket. Secondary wire is connected to the meter socket and run to ECE's transformer leaving a 10' coil of wire. The wire must be connected to the meter socket before ECE will energize the service. There will be a \$300.00 Connection fee. The "Request for Inspection" form will be filed by the electrician (or homeowner) with the State and ECE. If self-wired, the service must pass electrical inspection before it will be connected by ECE.

Trip charge: There is a \$45 charge for the second Staking trip. There is a Crew second trip charge based on a 2 hour Standard (wages & equipment charges) if service is not ready for connection on customer-owned secondaries. The applicable trip charge must be paid before service will be connected.

Overhead Single Phase service:

Option One:

For service on ECE pole, a 200-amp overhead meter loop unit with a 200-amp breaker and a GFI receptacle may be purchased from ECE or from an electrician. The cost for the meter loop unit is \$600 in addition to \$300.00 Contribution in Construction. If overhead lines need to be extended, then additional line extension charges will apply. The "Request for Inspection" form for the overhead meter loop unit will be filed by ECE if an ECE meter loop is used.

Option Two:

If meter socket is to be located on structure, or by a mobile or manufactured home, the electrician (or homeowner) will provide and install an underground meter socket. Secondary wire is connected to the meter socket and run to the pole leaving at least 30' of wire for ECE to reach top of pole. There will be a \$300.00 connection fee. The wire must be connected to the meter socket before ECE will energize the service. The "Request for Inspection" form will be filed by the electrician (or homeowner) with the State and ECE. If self-wired, the service must pass electrical inspection before it will be connected by ECE.

Trip charge: There is a \$45 charge for the second Staking trip. There is a Crew second trip charge that is based on a 2 hour Standard (wages & equipment charges) if service is not ready for connection on customer-owned secondaries. The applicable trip charge must be paid before service will be connected.

Wisconsin Electrical Inspections: Uniform Dwelling Code (UDC) requires that all new **One and Two family dwellings** require electrical inspection before service is connected. Contact municipality or WI Division of Safety and Buildings 608-267-5113 for additional information.

Structures not covered by UDC – A Certificate of Compliance stating that all electrical work is compliant with WI State and National Electrical code is required to be filed with ECE before service can be connected. This requirement applies to homeowner or contractor wiring.

Other Options Available:

Customer Secondary Plowing: \$13 per foot with a minimum charge of \$2,000. Winter construction charges will also apply November 1 – April 1.

Right-of-Way Trimming for new service: Contractor Estimate

Coop Owned Security Light:

Installation:

Overhead Service – On existing ECE pole, \$100 charge

\$300 if pole required (includes Security Light)

Underground Service - \$300 per pole (includes Security Light) plus \$5.80 per foot when underground conductor is required.

Winter Construction charges will apply.

Easement Recording:

There will be a \$75.00 charge for recording an easement that is needed for a service.

Effective December 8, 2006
